## ABSTRACT

for introducing the EHTEL-AIM study tour on  
**telemedicine in support to  
chronic disease management**

**EHTEL/ELO Network**  
Term of reference aka ELO Charter  
Draft v06, revision of 26 October 2011

### Charter for the EHTEL/ELO Network

- 1 The EHTEL/ELO Network is recognised as a Stakeholder Group within EHTEL
- 2 The EHTEL/ELO core membership is constituted by non-for-profit organisations focusing on National/Regional eHealth coordination, supervision and deployment, typically endorsed by a mandate of healthcare or governmental authorities. These organisations are referenced as "competence centres" or just "members" here.

## EHTEL 2012 Symposium

# *Fact not Fiction:*

## *The future of eHealth is already here*

6–7 December 2012  
EESC, Rue Belliard 99, Brussels, Belgium

# Our platform enables an overview

S114E7220

# EHTEL Peer Review

- ▶ One of the EHTELconnect services proposed by EHTEL to its members
- ▶ Objective: to assist organisations
  - in self-benchmarking
  - their eHealth strategy / action plan / implementation
  - with similar communities
- ▶ Not a “Peer review” in academic sense, aiming at evaluating the performance of a professional
- ▶ Ran for the first time in 2009 for the MoH of Sweden

*Recommended by*

# Outcome of an EHTEL Peer Review

- ▶ A two-day workshop
  - During which the programme/project managers from the inviting organisation(s)
  - Present and discuss their eHealth programme and projects
  - Before an audience of “Peers”, member of the EHTEL Network
- ▶ A workshop report
  - Compiles the presentations and the discussions among experts
  - Concludes with observations organized in the form of a

## SWOT ANALYSIS

	Helpful to achieving the objective	Harmful to achieving the objective
Internal origin (attributes of the organization)	<b>S</b> Strengths	<b>W</b> Weaknesses
External origin (attributes of the environment)	<b>O</b> Opportunities	<b>T</b> Threats

# The Peer Team

## ► Multi-stakeholder

- Consultancy organisations
- Service delivery organisations
- Public authorities
- Industries

## ► Multi-disciplinary

- Physicians, pharmacists, economists, IT and Business administration experts, experts in political science

## ► European/international

- Belgium, Denmark, Estonia, France, Germany, Israel, Netherlands, Norway, Sweden, United Kingdom (England & Scotland).

## Workshop Report

### *Peer Review* eHealth Strategy and Action Plan of Finland in a European Context

Helsinki, Finland  
26 - 27 February 2013

Report Compilation:  
Dr Stephan H Schug MD MPH, EHTEL  
Ms Diane Whitehouse, EHTEL

Version 0.16 of 23 May 2013

# Disclaimer

- ▶ Overall, the presentations made were considered by the peer review experts to be comprehensive and detailed.
- ▶ However, they could have been improved regarding two areas of focus.
  - First, throughout the series of presentations, no precise “case studies” were discussed in any detail.
  - Second, there were no presentations from senior clinicians or more local operational managers (such as domain experts and champions).

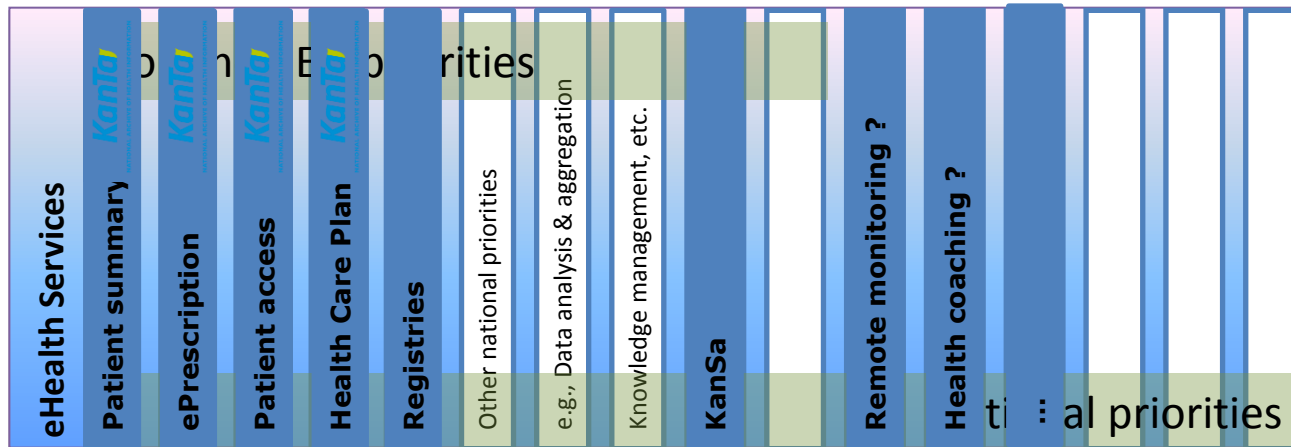

# Scope: the eHealth National Architecture

### Sustainable Healthcare Sharing Information and Knowledge for Better Health

## Sustainable Healthcare Sharing Information and Knowledge for Better Health

# Strengths (internal origin/helpful)

- ▶ World-level benchmark
- ▶ A strategic change management programme
  - It provides a compelling vision of integrated care
  - It is supported by an appropriate legislation to meet
    - Societal and financial challenges and
    - The need to modernise the health and social care systems
- ▶ Quality deployment process:
  - Early start, hence there is already a long experience
  - General overcoming of resistance to change (e.g. through education),
  - System's timeliness and responsiveness

## SWOT ANALYSIS

# Strengths (...)

- Finland is sitting on a metaphorical "**gold mine**"
- The quantity, timeliness and quality of health data entered and collected from routine healthcare is impressive.
  - Almost all records are “electronic from birth”
  - Today, the country has direct access to a source of valuable information and resources

## SWOT ANALYSIS

	Helpful to achieving the objective	Harmful to achieving the objective
Internal origin (Strengths & Weaknesses)	Strengths <b>S</b>	Weaknesses <b>W</b>
External origin (Opportunities & Threats)	Opportunities <b>O</b>	Threats <b>T</b>

# Weaknesses (internal origin/harmful)

► The context of care:

- New care pathways, chronic disease management, patient empowerment are required for modernising the health and social care system.

► Healthcare practitioners could have a more proactive role:

- They should act as coaches and guides to support health care improvement, working with "communities of patients" or "communities of providers".

SWOT ANALYSIS

	Helpful to achieving the objective	Harmful to achieving the objective
Internal origin (attributes of the organisation)	Strengths S	Weaknesses W
External origin (attributes of the environment)	Opportunities O	Threats T

# Weaknesses (...)

- ▶ Limited return-on-investment and benefits analysis:
  - Because an infrastructure is mainly an enabler and requires services to deliver clinical and economic value
- ▶ The policy behind the tools:
  - To focus on what the health system overall is attempting to achieve, and on what the crucial policy and political decisions.

## SWOT ANALYSIS

# Opportunities (external origin/helpful)

SWOT ANALYSIS

	Helpful to achieving the objective	Harmful to achieving the objective
Internal origin (strengths & weaknesses)	Strengths <b>S</b>	Weaknesses <b>W</b>
External origin (opportunities & threats)	Opportunities <b>O</b>	Threats <b>T</b>

- ▶ Policy, governance and organisation
  - Invitation from Mr. Esko Aho to seek for positive disruptive innovation in the Finnish health/social care system
  - The creativity of the actors involved, which requires appropriate incentives to act
- ▶ Leadership, business and benefits
  - Finland has a leadership position with regards to the transformation of health and social care systems
  - Need for evidence on clinical effects of the changes to the system and their measurement
  - Need for quantitative indicators e.g. on adverse events

# Opportunities (...)

## ► EHTEL think thank

- To showcase solutions in place in Finland
- To compare and contrast eHealth systems and their impact on the transformation of the health care system
- To promote the peer review process as a bench-learning tool for both advanced and emerging eHealth systems

### SWOT ANALYSIS

	Helpful to achieving the objective	Harmful to achieving the objective
Internal origin (attributes of the organization)	Strengths S	Weaknesses W
External origin (attributes of the environment)	Opportunities O	Threats T

# Threats (external origin/harmful)

- ▶ The demand for personal health data from citizens and patients may put the service provision under stress
- ▶ Risk of overload of information because of the volume of collected data
- ▶ The value and sensitivity of the data held inside the various health and care systems increases risks

## SWOT ANALYSIS

	Helpful to achieving the objective	Harmful to achieving the objective
Internal origin (attributes of the organization)	Strengths S	Weaknesses W
External origin (attributes of the environment)	Opportunities O	Threats T

# Highlights

- ▶ A long-term development of eHealth systems and services, developing from a mainly localised approach towards a more national-level approach
- ▶ The apparent openness, trust, and transparency makes it a very helpful setting in which to develop eHealth systems
- ▶ An impressive degree of regionalism and local "democracy"
- ▶ While the "first generation" tools have now reached its limitations, Finland has to move to a next generation of services.

# Thank you
