Among our customers

- Finnish Healthcare (20 000 users)
- the Healthcare Regions in Sweden (450 000 users)
- the Healthcare Regions in Norway (250 000 users)
- the National Swedish Police Force (30 000 users)
- the city of Stockholm (50 000 users)
- the Swedish Tax Agency (13 000 users)
- the Swedish Social Insurance Administration (14 000 users)
- the Swedish Migration Board (5 000 users)
- Ericsson (130 000 users)
- and many more organisations for whom IT security is crucial

Background

On Windows, Linux and OS X Net iD Enterprise handles the communication with the card for all applications who uses MS-CAPI and/or PKCS#11.

That you **can not** do on iOS or Android!

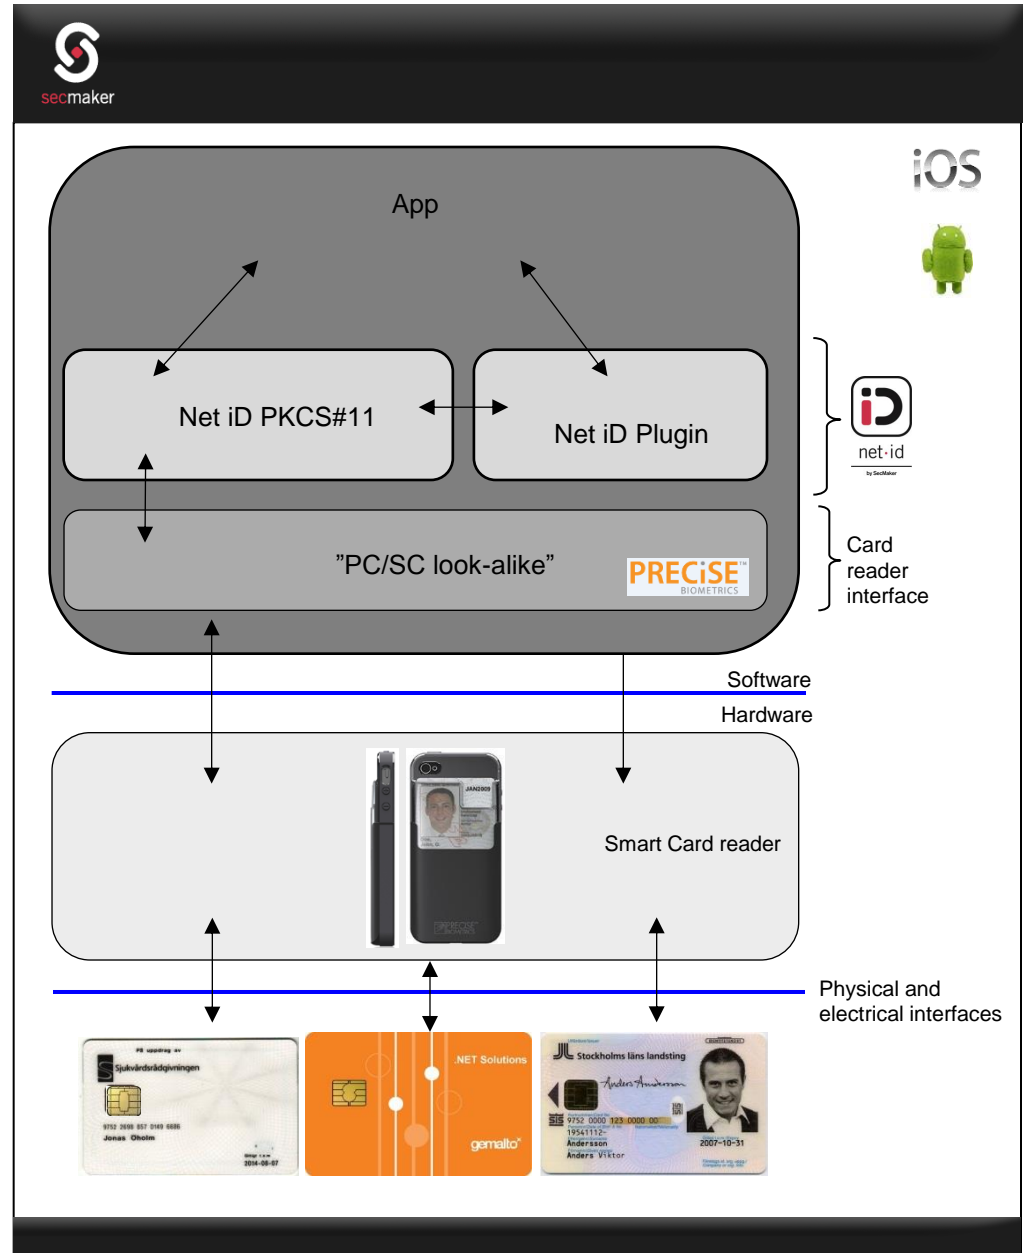

So we started with: **Net iD SDK**

ios

Net iD SDK:

a) Means that the developer is in full control, but also has the full responsibility for building the whole authentication process

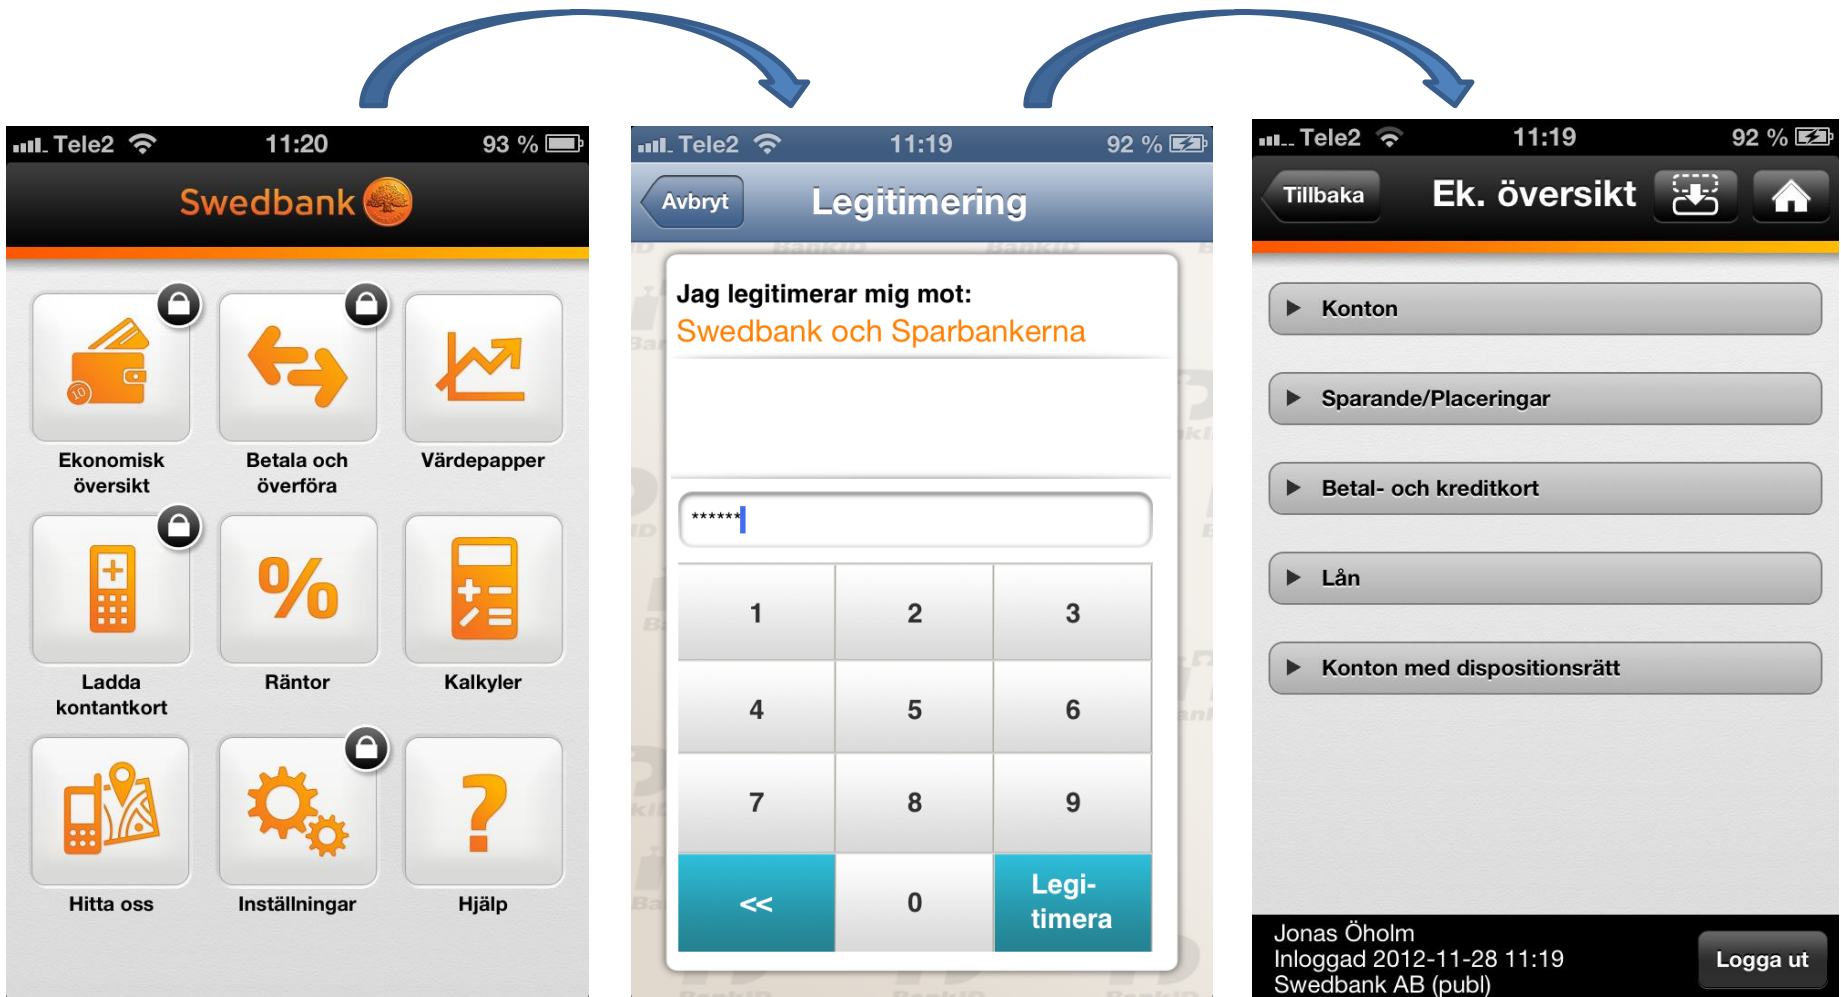

b) Every app must contain Net iD SDK

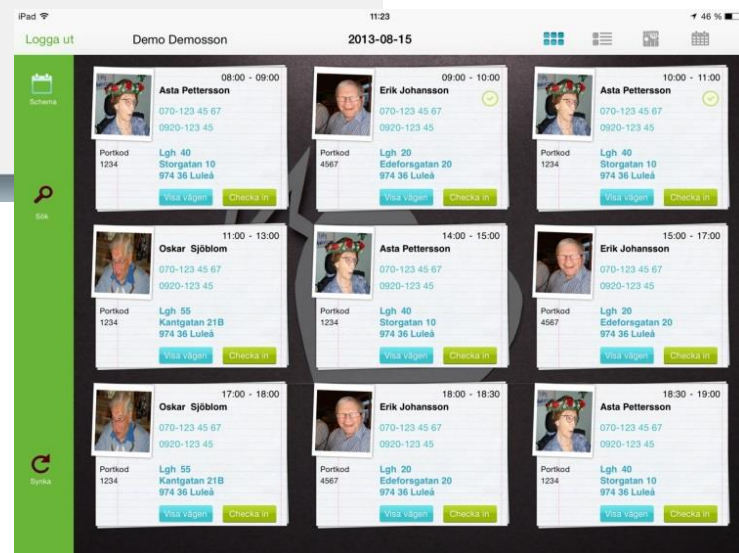

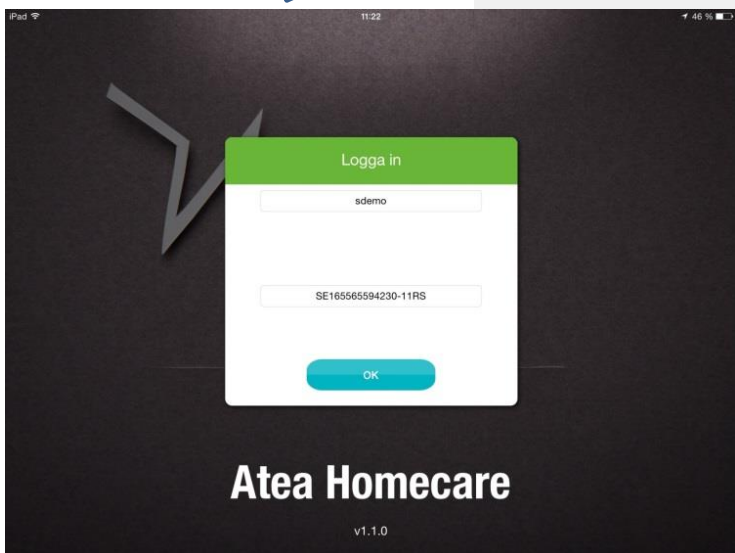

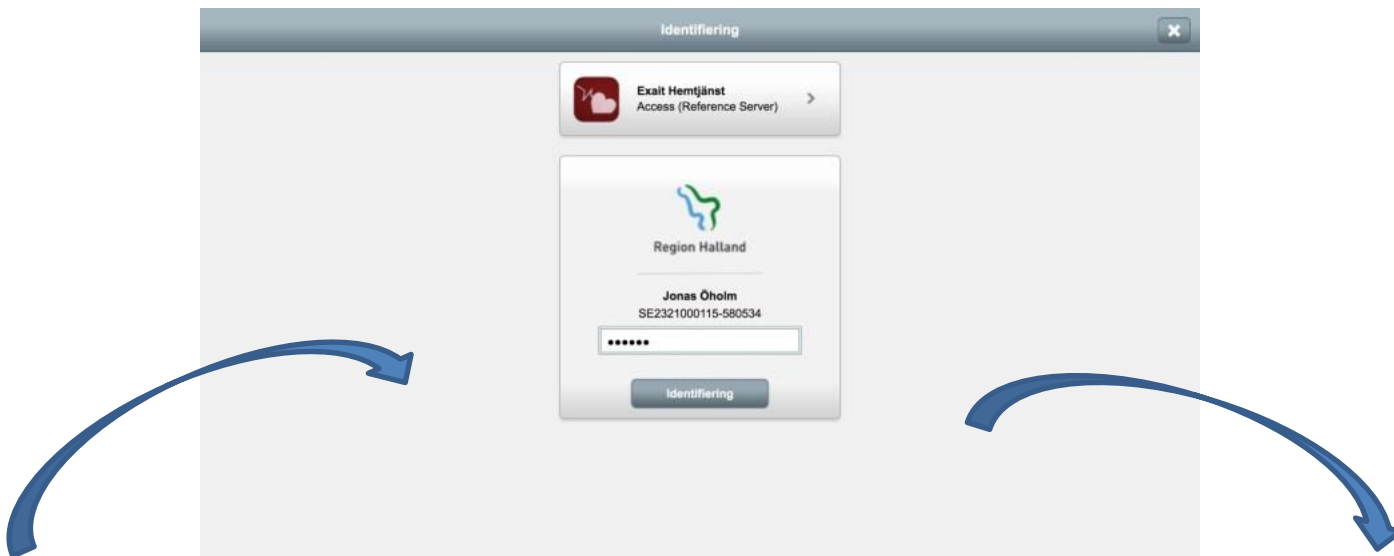

For many, but not all, developers this was a bit too tricky...

You're welcome, @Phil. This is the kind of problem that causes me to consider giving up programming, to live a nomadic life of collecting berries, hunting squirrels, and never touching a computer again ... – Nate
May 29 at 4:45

So we did like the Swedish banks... ie. all PKI-related stuff is done in a separate app

...but with support for cards

Net iD Access

- Manages the integration of card readers, certificates and keys towards client applications
- Complete security on mobile devices
- Access to critical information anywhere
- Integrate with existing PKI-infrastructure
- Supports iOS, Android, Windows, Linux & OS X

Tactivo for iPad

- Security and convenience
- Supporting BYOD
- Same card for new solutions
- Toolkits for development partners
- Treserva, Viva, Magnacura, Salitor SITHS, iotaMED, Diabetes Tool, Appva, Pascal...
