

Health Information Support for the Future

A collaboration project

IT-days – Jyväskylä

LANDSTINGET BLEKINGE

SUSSA

Strategisk Utveckling av Sjukvårds Stödjande Applikationer

A customer group formed, in the late ninetens, for cooperation, management and development of a common electronic health record

2014 – Creating a vision

Basic principles

Collaboration and transparency

Sweden's national vision for E-health

What are the suppliers plans for the future?

Adopt a patient and population perspective

Operative focus and coworker participation

Horizon scanning

January 2015

- 7 suppliers
- 290-430 participants
- Questionnaires

Workshops and more workshops

- Patient centered care?
- Your best day at work – in 5 years?
- Future Health information support – what does it mean?

If I had asked people what they want before the
T-Ford they would have answered
– "A faster horse!"

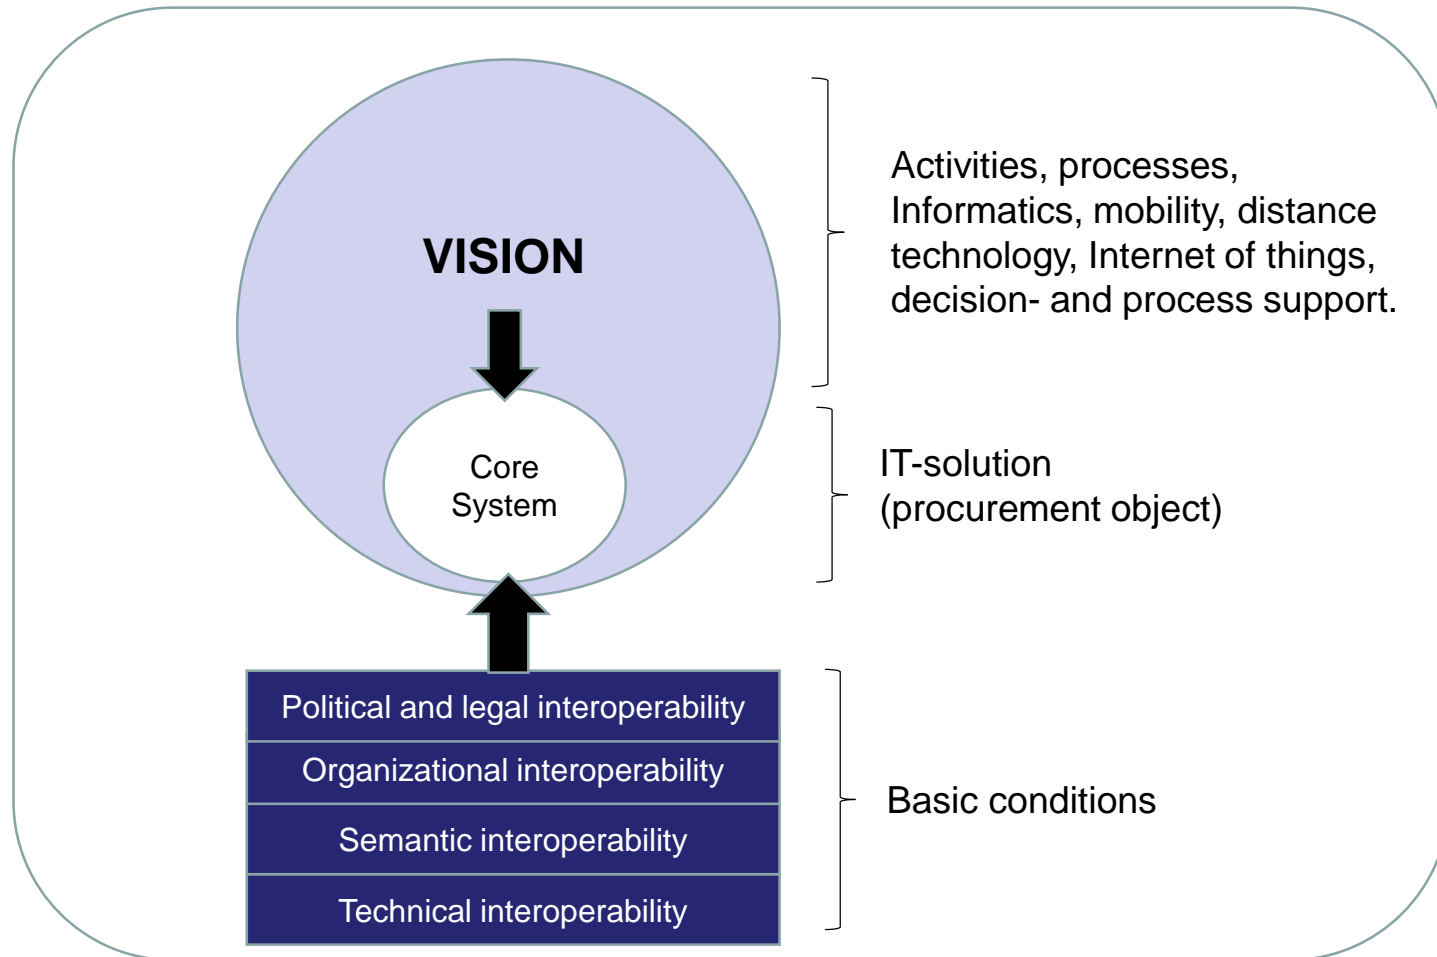

Henry Ford

The result – June 2015

**Health Information Support for the Future
Vision and Strategies**

A Health Information Support for the Future

Our expected effect goals

Patients can establish active partnership with healthcare providers

Staff can access a common structured journal and an effective tool for decision support and communication

Technicians will have a system that continuously develops and adapts to new standards and legislation

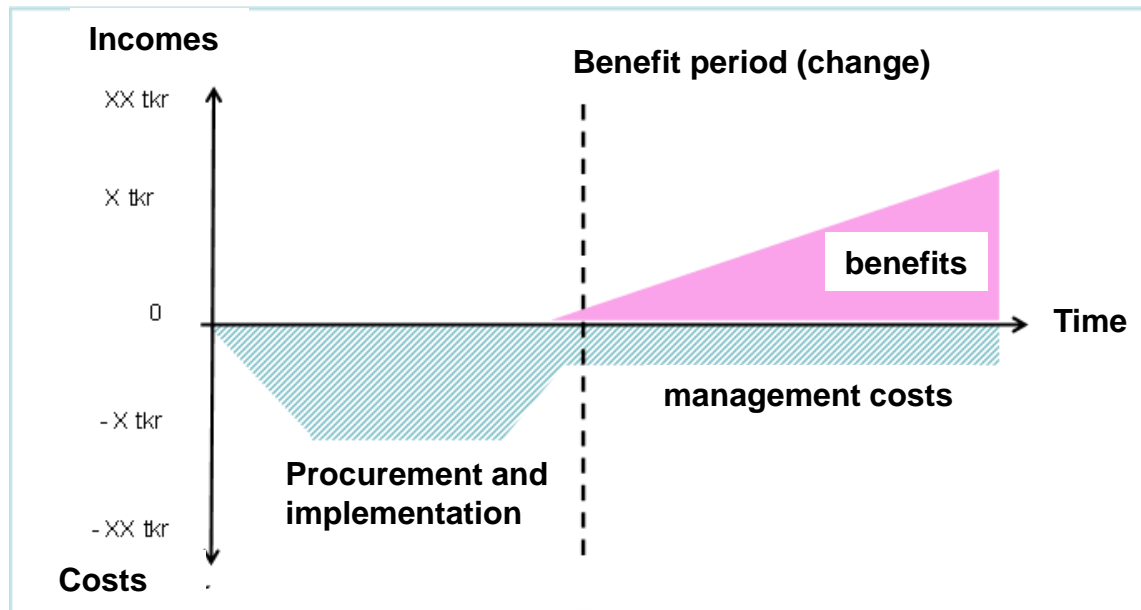

Architects will get a system with interoperability at all levels

Management can have an effective tool for monitoring quality and production

Scientists can access data with high quality for research and innovation

Transforming effects to benefits

Break down the effect goals into evaluable objects that you can follow up and measure over time

Collaboration!

Together we can:

- Find new and more efficient ways of working in healthcare
- Offer a more equal health care
- Provide efficient and standardized implementation and management
- Take better advantage of the digital revolution

The digital revolution

~~from 'Hospital' to 'Home'~~

from 'Hospital' to 'Phone'

everyone, every time, everywhere – connected!

A digital strategy is not doing what we do today digitally

It is to totally reevaluate our view of the world

Reasons for collaboration

Consequences of collaboration

Local adaptations and amendments

**Same for all
counties/regions**

- **Health Informatics**
- **Process development**
- **Integrations**
- **Outdata**
- **Implementation**
- **Communication**

Aiming at a strong collective governance

Two governing principles:

Joint management

- Cost effectiveness
- A more equal care.
- Increased synergies
- Reduced vulnerability
- Shared responsibility for support 24/7
- A broader knowledge base
- Benchmarking

Acting as one customer

- A strong partner in national forums
- A strong partner against third parties
- Achieve the goals set up

Ongoing joint projects

- Health Informatics
- Process development
- System integrations
- Out data and follow-up
- Establishment of a client organization
- Preparation for implementation
- Change leadership

Challenges

- Participation and transparency
- Clear decision-making processes.
- Will and willingness
- The importance of trust

You can please someone
sometimes...

**That's what collaboration
is all about!**

But you can't please
everyone all the time
